And also subscribe us to get the latest Autocad 2012 Serial key for other programs.Q: How to use single arrow notation in Julia? Possible Duplicate: When and where do I use single arrow notation in Julia? In Julia, when I write $f \rightarrow g \Rightarrow h$ it will be interpreted as $f(g) \Rightarrow h$ is there a way for the interpreter to interpret it as a single arrow? A: You can use a named function as the right side of the assignment operator. $f; g = g \rightarrow h$ This will ensure that the arrow will always be interpreted as a single arrow. If you then define the function f again at a later time, you will get: `julia> f; g = g -> h f (generic function with 1 method) julia> typeof(f(1,2,3)) f julia> f(1 2 3 f -> g -> h` If you want to have $f \rightarrow g$ and $g \rightarrow h$ side by side, you f678ea9f9e
